

Aruna Gudivada

Data Scientist

Austin, TX | 980-422-5926 | arunak.gudivada@gmail.com | [linkedin.com/in/aruna-gudivada](https://www.linkedin.com/in/aruna-gudivada)

PROFESSIONAL SUMMARY

Results-oriented professional with 10+ years of experience transforming complex data into actionable business insights, building, fine-tuning, and productionizing scalable data models and end-to-end data pipelines in high-impact environments (global supply chain and operations at Apple). Expert in Machine Learning (supervised/unsupervised), Big Data Analytics, and Statistical Modeling.

EDUCATION

Master of Science in Analytics

- **Georgia Institute of Technology**, Atlanta, GA | Graduated **Dec 2024**
- Coursework: **machine learning/AI, statistical modeling**, data visualization, optimization and simulation

Bachelor of Technology (Electronics & Communication)

- Gayatri Vidya Parishad College of Engineering (JNTU Kakinada), India | May 2009

TECHNICAL SKILLS

- **Languages & ML:** Python (pandas, NumPy, scikit-learn, PyTorch, TensorFlow, PySpark), SQL, R, Bash
- **Machine Learning:** Regression, Classification, Advanced Supervised Learning, Unsupervised Learning, Bayesian Modeling, Neural Networks and Deep learning, SVM, Random Forest, XGBoost, Clustering, PCA, Ensemble Methods, ARIMA, Time Series Forecasting, Predictive Forecasting & Anomaly Detection, A/B Testing & Operational Experimentation.
- **Visualization & BI:** Tableau, Matplotlib, Seaborn, ggplot2, Excel
- **Tools:** Jupyter, VS Code, PyCharm
- **MLOps & DevOps:** Apache Airflow, Git, Docker, Kubernetes, CI/CD basics, dbt
- **Cloud & Big Data:** Snowflake, AWS (S3, Glue, Redshift), Azure ML, PySpark
- **Data Platforms & Big Data:** Snowflake, Databricks, PySpark, AWS (S3, Glue, Redshift), Azure ML, Teradata, Oracle

PROFESSIONAL EXPERIENCE

Tata Consultancy Services (TCS) – Client: Apple Inc.

Senior Data Scientist

Austin, TX | Nov 2021 – Dec 2025

Project - Business Process Reengineering – Decision Support

Summary:

- Designed and productionized supply chain data models integrating upstream/downstream nodes for finished goods and refurbished products, enabling real-time visibility across inventory.
- Applied time series forecasting to large-scale inventory datasets, extracting insights for multi-million-dollar decisions.
- Built scalable SAP-to-logistics inventory integration layer with automated data synchronization and validation; reduced stock discrepancies by 98%, and enabled seamless visibility for high-volume global operations.
- Re-engineered and productionized critical supply-chain data pipeline, reducing end-to-end runtime from 9 hours to under 2 hours (78% improvement); enabled same-day executive reporting and real-time operational decision-making across global teams.
- Increased product's manufacturing reporting accuracy from 10% to 98% by re-engineering data pipelines and implementing rigorous validation frameworks.
- Designed reusable identifier linkage framework connecting replaced and new units; adopted across several enterprise-wide strategic initiatives and recognized as key enabler for restricted-material compliance and trade reporting solutions.
- Built real-time for a product disposition dashboard integrating multiple recovery methods, cutting reporting cycle from days to minutes and driving 25% higher accuracy in global refurbishment and sustainability decisions.
- Performed multiple ad-hoc statistical analysis, reconciliations of inventory numbers across multiple data sources and root-cause investigations for Business leadership, consistently delivering insights within 24–48 hours.

Texas Comptroller of Public Accounts

BI Developer / Systems Analyst IV

Austin, TX | Jun 2018 – Oct 2020

Project- CPA Reporting

Summary:

- Developed interactive Tableau dashboards for Sales Tax, Franchise Tax, Mixed Beverage, and Property Tax divisions, reducing monthly reporting cycle from 10 days to <2 days.
- Designed and optimized complex SQL stored procedures supporting production analytics for taxes transactions annually.
- Partnered with business stakeholders to gather requirements, build prototypes, and iterate on visualizations adopted agency-wide.

ICICI Bank

Data Analyst – Assistant Manager (IT)

Mumbai, India | May 2011 – Dec 2014

Project- Trade Online – Corporate Trade Finance Digital Transformation

Summary:

- Drove data-backed migration strategy that moved 42% of high-volume corporate trade clients to the online portal within 3 years, achieving 68% faster transaction turnaround and 24x7 submission capability.
- Built operational and executive dashboards that became the single source of truth for trade finance branches.
- Conducted customer segmentation and behavioral analysis using statistical techniques to prioritize high-value accounts for digital onboarding.
- Identified and resolved critical data quality issues in core banking systems, improving trade transaction success rate by 18%.

CERTIFICATIONS

- Tableau Certified (Edureka)
